

Ugwuanyi Chijioke Alphonsus

Fullstack Developer

+2348103350884 | cj.ugwuanyi@gmail.com | Lagos, Nigeria

PROFESSIONAL SUMMARY

Full-stack software engineer with over 4 years experience developing robust code for high-volume businesses and personal interests. Single handedly build the booking application for [Corporate Transit](#). I was a mentor at Andela for beginner web developers in the year 2018 while an intern at [Adbasador Media Ltd](#) An enthusiastic team player and deep creative thinker, in my free time, I blog, read, learning non-technical skills and enjoy time with family.

TECH STACK

Front End	CSS3, Bootstrap, HTML5, JavaScript, JQuery, React.js, Angular.js, Anglar, Java
Back End	JavaScript, Node.js, Express, Hapi, Java.
Data Stores	PostgreSQL, MongoDB.
Web Servers	Apache HTTP Server, Nginx.
Operating Systems	Windows.

EXPERIENCE

1. Fullstack Developer | [Corporate Transit](#) | Lagos | Remote 2018– 2019

Corporate Transit is a startup that is focused on providing workers and companies as a whole with commuting services to and from home and work every working day in the city of Lagos. It tries to alleviate the stress of transportation off commuters as they commute to work daily.

- *What did I build?* I was contracted to build their trip booking system.
- **Technologies:** Mongo, Node(Express), CSS3, Bootstrap, AngularJS, Nginx

2. Fullstack Developer Intern | [Adbasador Media Ltd](#) | Lagos | Onsite? 2018– 2019

Adbasador media Ltd is a startup that aims to provide a more engaging and fulfilling platform for businesses/brands to advertise and reach more people through social media. It provides an easy to use and self-service application for running ads on regular status updates and users' display photos. The technology it comes with is the first of its kind, mostly in Africa.

- *What did I build?* I built a professional mentoring platform through which professionals and experts in various fields can be contacted by people who need their experiential knowledge and advice/tips.
- **Technologies:** Mongo, AngularJS, Nodejs, Framework7, JQuery.

3. Frontend Developer | Trust Bond | Enugu, Nigeria / Onsite

2017

Trust Bond was an application that was intended at being a minibank, a piggy vault through which students could save a little of their pocket money. It was a project conceived by a group of students at the University of Nigeria, Nsukka.

- *What did I build?* I was the lead frontend engineer that created the user interface for the web platform.
- **Technologies:** Reactjs, Bootstrap and CSS3.

4. Backend Developer | Andrax Services | Enugu, Nigeria / Onsite

2016

Andrax Services was a startup that aimed to provide seamless payment platform for students on campus.

- *What did I build?* I was the lead frontend engineer that created the user interface for the web platform.
- **Technologies:** NodeJs, MongoDB.
